Training Speaker:

Kinley Deller,
King County C&D Specialist
and Program Manager

Wednesday, October 17, 2012

9:00—11:00 AM

**King Street Center, 201 S. Jackson Street
King and Chinook Conference Rooms, 6th floor**

Training Description:

Beginning October 1 King County construction and demolition projects will be able to begin using GreenHalo to track construction and demolition diversion and recycling data for their projects. The GreenHalo software is web-based and offers time-saving advantages over current hard copy C&D reporting systems. This training will provide information on how to get your project set up to use GreenHalo.

Diverting C&D materials is a green building effort that achieves credits under the Leadership in Energy and Environmental Design (LEED) and the King County Sustainable Infrastructure Scorecard rating systems. The ability to quantify materials diverted from landfills produced by county projects is a helpful factor in determining the County's environmental footprint. Minimizing King County's environmental footprint is one of the objectives under the Environmental Sustainability Goal of the King County Strategic Plan.

Learning objectives:

- Understand the basics of C&D diversion (commingling, 2-bin requirement, facility diversion rates, etc.)
- Understand the essential principles of C&D reporting (weight vs volume, documentation, etc.)
- Utilize GreenHalo to successfully track C&D diversion for any project
